The Integrated Planning Process for BioNova® Natural Swimming Pools

BioNova® Natural Pools provides the ultimate in high quality, distinctive Natural Swimming Pools (NSPs). We work closely with our Clients to understand their goals and desires, we provide design drawings and construction plans, and our licensed BioNova® Dealer Partners are the artisans who produce the right end product, on time and on budget.

We utilize an Integrated Planning Process: a clear, proven approach based on detailed research and sound decision making.

Integrated Planning Process

Step 1: Project Definition

Step 2: Goals and Objectives

Step 3: Information Gathering

Step 4: Strategies

Step 5: Quantitative Requirements

Step 6: Summary

Examples

Size, Style, Function, Budget

Lap swim, Family fun, Outdoor living, Landscaping

Site topography, Soil conditions, Local requirements

Construction alternatives, Hydraulics, Circulation

Equipment, Materials, Labor

Scope of Work, Timeframe, Cost estimate

Integrated planning captures all information (variables) for project design and implementation. Cost is a factor of every variable, and every variable must therefore be specified in detail in order to budget properly. The planning process allows us to effectively embrace the Client's goals and to minimize unexpected design and budget changes. Simply put, we know that comprehensive planning will result in the highest quality product and a satisfied Client.

Once the Integrated Planning Process is complete and the Scope of Work is finalized, the Design Process officially begins. The client will be involved as we develop the Design that best reflects the requested vision and budget. We will then provide scaled drawings, 3D renderings, plans, sections, and technical illustrations for project engineering.

BioNova® Natural Pools offers complimentary Client discussions for Step 1 (Project Definition) of the Integrated Planning Process. A formal *Design and Consulting Services Agreement* is required for Clients interested in proceeding with Integrated Planning Steps 2 through 6, culminating in the Scope of Work, Timeframe, and Cost estimate for the project.

BioNova® Natural Swimming Pools are completely chemical-free, healthful for humans and the environment, and ecologically harmonious with nature. Please [click here](#) to view our gallery of residential Natural Swimming Pools, and feel free to contact us to discuss your project.
